BALLISTIC HELMET

Accessories-2

Rails

Our advanced helmet configuration platform allows for the configuration of a unique and versatile rail attachment system which allows for the fast and effective attachment of secure head borne accessories such as audio, video and lighting systems.

The rail attachment is offered as an upgrade across our line of advanced combat systems and can be packaged with the low profile secure attachment shroud for NVG's on the front mount of helmet platforms.

Shroud

Our universal compatible shroud mount provides a secure attachment on the front of it's advanced combat helmet system for the addition of most NVG's, video and illumination equipment. The multi-point attachment provides a unique and powerful platform for critical equipment and mission ready deployment.

Velcro

Our velcro mount attachment is designed for incorporation when a rails and shroud application is required for allowing the addition of additional critical mission equipment including illumination accessories, communication, counterweights and identification placards.

Bungees

Our bungees, provided as optional with the rails and shroud system, provide the needed support and stabilization for the NVG mount of choice.
