FEATURES

The Modular Scalable Vest GEN II (MSV) is a body armor system designed to adapt to changing mission requirements. Its modular design supports concealable, low-profile, plate carrier, and full tactical configurations, combining soft armor and hard armor plates as required. As part of the Army's Soldier Protection System (SPS), the MSV provides a configurable platform for ballistic protection and mission-essential equipment.

- **Scalable Configurations: :** Transitions between concealable, low-profile, plate carrier, and full tactical configurations to meet mission requirements.
- **Soft and Hard Armor Integration:** Accommodates soft armor ballistic inserts and hard armor plates, allowing protection to scale with the selected configuration
- **Modular Equipment Attachment:** MOLLE-compatible attachment surfaces support the carriage of pouches and mission-essential equipment.
- **Emergency Quick Release:** A buckle-based release system allows rapid removal in emergency situations.
- **Rapid Reassembly:** GEN II supports quick reassembly following release.
- **Soldier Protection System Integration:** Functions within the Army's Torso and Extremity Protection system alongside the Ballistic Combat Shirt and Blast Pelvic Protector.
